

Wulf Gaertner Autoparts AG – How it all began

- Founded 50 years ago by Wulf Gaertner alias “Mr. Autoparts”
- The founder lived in central America from 1955-57.
- In the beginning he exported cars into this part of the world.
- Driven by his passion – *Porsche* and car races – he had the idea to sell the needed spare parts of German producers into this market.

His ideas soon travelled around the world....

HD Autoparts for friends.

Organisation

Our headquarters today:

- 230 employees
- Approx. 17.000 square meters area
- 25.000 pallet spaces
- Modern warehouse with movable shelves, picking-unit for bulk goods, barcode-registration

MEYLE is investing in logistics

- 9,000 pallets will be handled fully automatically
- Modern logistics with radio-controlled warehouse (WLAN) gives faster access to fastmovers and makes express deliveries possible

MEYLE catalogue and data

- Modern IT system
- Data supplier of TecDoc
- Faster overview of our products in informative catalogues
- Order and inquiry processing via TecCom. TecLocal since July 2007. More clarity with the prices.
- Weekly updated internet catalogues

MEYLE Products - Overview

MEYLE has about 9.500 Product

Separated in the following product groups:

- Steering & suspension
- Rubber / Metal
- Axle parts
- Damping
- Cooling
- Electrical parts
- Brake parts
- Filter (Fuel, Oil, Air & Cabin air)
- Belts, tensioner, pumps
- Repair kits

<p>1.0 Objective The purpose of this specification is defined the incoming quality control method of bonding concerning with bushings which supplied from subcontractors to FORMPART A 5.</p> <p>2.0 Scope That control method will be applied for all bushings which have outer metal ring while they come to incoming quality control to FORMPART A 5.</p> <p>3.0 Responsibility The responsible of applying the specification are subcontractors supplied bushings and incoming quality control inspectors of FORMPART A 5.</p> <p>4.0 Application 4.1 Bonding Control: 4.1.1. The bushing which applied quality control process is cut with a saw from its outer ring without any of damage to the rubber as on the figure shown on the left side. The width of the label must be approx. 10 mm. 4.1.2. The label cut from the outer ring of bushing is separated from the rubber with using a pliers to the direction of arrow as on the figure shown on the left side. 4.1.3. If the rubber bonded area over then 65% the bushing will approved else it will reject.</p>

VW Sharan: Dreier-Rückruf

Volkswagen ruft den Sharan wegen diverser Mängel in die Werkstätten zurück. Wie VW auf Anfrage von auto-motor-und-sport.de mitteilt, sind europaweit 69.000 Fahrzeuge aus dem Bauzeitraum 2001 bis 2005 betroffen. In Deutschland müssen rund 30.000 Modelle in die Werkstatt.

Im Rahmen einer Serviceaktion - es handelt sich nicht um einen offiziellen Rückruf über das Kraftfahrtbundesamt in Flensburg - werden folgende Mängel behoben:

- Die vorderen Koppelstangen, zwischen Stabilisator und Federbein, werden ersetzt. Hier hatten Kunden Geräuscentwicklungen bemängelt.
- Das Druckrohr des Abgasturboladers bei Automatik-Modellen mit dem 115 PS starken Pumpe-Düse-Dieselmotor muss ersetzt werden
- Das Steuergerät des Xenon-Lichts wird ausgetauscht. Es konnte zu einem Ausfall des Lichts links oder rechts kommen.

Den Werkstattaufenthalt beziffert Volkswagen mit maximal zwei Stunden, sofern alle drei Mängel gleichzeitig auftreten. Die Reparatur ist kostenlos, die Halter der Sharan-Modelle werden schriftlich benachrichtigt. Unfälle seien nicht bekannt, so Volkswagen.

Product information about shock absorber

Basic information about shock absorber

Shock absorber

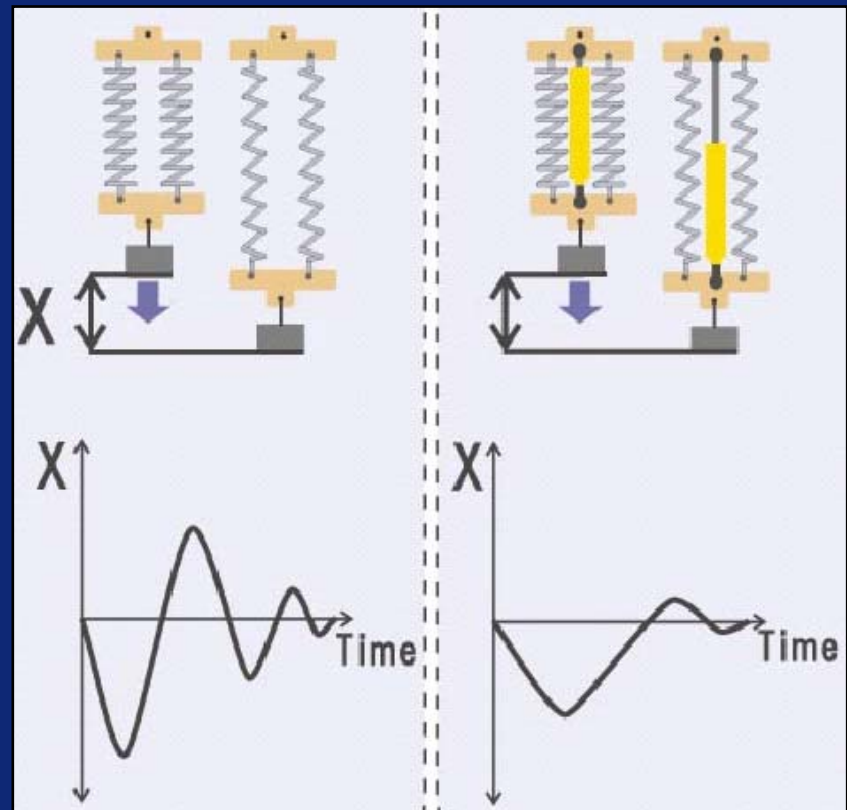

Definition:

A shock absorber is a mechanical device designed to smooth out or damp a sudden shock impulse and dissipate kinetic energy to heat energy

In a vehicle, it reduces the effect of travelling over rough ground. Without shock absorbers, the vehicle would have a bouncing ride.

Without damper

With damper

Types of telescopic shock absorber

- A: Piston rod
- B: Piston Valve
- C: Working cylinder
- D: Oil
- E: Separation piston
- F: Gas

Monotube gas pressurized shock absorber

- A: Piston rod
- B: Reservoir tube
- C: Gas
- D: Piston valve
- E: Working cylinder with oil
- F: Bottom valve

Twin tube shock absorber

Twin tube shock absorber

Design:

- Inner Tube / working cylinder totally filled with oil
- Outer tube / reservoir tube filled with oil & gas
- Connection of both tubes through bottom valve
- Damping is realized by piston and bottom valve

Characteristics:

- Small hight
- Difficulties in heat offtaking
- Danger in bubbling during fast movements
- Reduction of damping effect at bubbling
- Good cost - performance ratio
- Only upright assembly in car possible
- Heavier than mono tube shock absorber

Working stages in a twin tube shock absorber

Compression

Zugstufe

McPherson - Axle

Twin tube spring strut (McPherson strut)

Characteristics:

- Basic design is identical to twin tube shock absorber
- Support of the helical spring forces through a spring seat (McPherson solution)
- Wheel positioning of the axle together with control arms
- Transfer of wheel steering
- Supporting the braking torques
- Piston rod diameter, piston rod guide and piston are especially sized for higher loads

Design of a twin tube spring strut
