Products

	MEYLE No.	Reference No.
Control arm:	316 050 0044/HD	31 12 6 775 967 31 12 6 776 871 31 12 6 779 908
Bushing:	314 610 0008/HD	
Ball joint:	316 010 0014	

Control arm

to fit

BMW 5, 6, 7 Series (F01-04, F06-07, F10-13)

as OE

Problem

- Three different OE control arms available for different camber specifications
- Control arm bushing not available separately, the ball joint cannot be replaced!

Effect

- Time-consuming repairs as the actual wheel alignment must be determined before the required control arm can be identified
- Initial wheel alignment measurement is not possible on a car that has been involved in an accident. Repeated control arm replacement may be necessary, if wheel camber proves incorrect after the new control arm has been installed!
- The complete control arm assembly must be replaced, even if only the joint or bushing is defective

Solution

- One MEYLE control arm replaces three original designs thanks to the adjustable ball joint for continuously variable camber correction
- The ball joint is available separately
- The critical diameter on the HD control arm bearing is reinforced by using more elastomeric material
- The HD control arm bushing is available separately and also fits the original control arm

Advantage

- The universal design helps minimize repair time and costs
- Significantly longer part life and driving comfort
